Management Discussion of Fund Performance

Results of Operations

The Partnership commenced operations on March 28, 2025. The Partnership issued 230,620 Class A – National Class units, 472,800 Class A – British Columbia units, 78,150 Class A – Quebec units, 123,300 Class F – National Class units, 8,300 Class F – British Columbia units, 30,550 Class F – Quebec units, and 1 Class P unit. As at June 30, 2026, all classes of units issued were outstanding.

Total expenses incurred by the Partnership for the period ended June 30, 2026 were $239,764 comprised mainly of $94,417 in administrative fees, $67,015 in commission and fees, $35,359 in other fees, $12,625 in audit fees and $11,411 in custodian fee.

The net realized gain on sale of investments for the period ended June 30, 2026 was 2,581,161 and the unrealized loss of investments for the period ended June 30, 2026 was $ $3,173,330.

At June 30, 2026, net assets attributable to Limited Partners for Class A – National Class units was $2,049,538 or $8.89 per unit, for Class A – British Columbia units was $3,907,671 or $8.26 per unit, for Class A – Quebec units as $662,348 or $8.48 per unit, for Class F – National Class units was $1,149,917 or $9.33 per unit, for Class F – British Columbia units was $ 70,992 or $ 8.55 per unit, for Class F – Quebec units was $271,168 or $ 8.88 per unit, for Class P units was $ 619,645 or $ 619,645.00 per unit, and for Class GP units was $ 317 or $317.00 per unit.

Recent Developments

The first half of 2026 marked a significant change in market conditions from the constructive environment experienced throughout much of 2025. While long-term fundamentals supporting Canadian mineral exploration remained favourable, the outbreak of the Middle East conflict in late February 2026 materially weakened investor sentiment toward higher-risk assets. Rising energy prices, renewed inflation concerns, uncertainty surrounding future monetary policy and heightened geopolitical risk contributed to declining trading volumes and reduced liquidity across the junior exploration sector. Although several key commodities continued to perform well, junior exploration equities generally underperformed the underlying commodity markets as investors adopted a more risk-averse posture.

The 2025 Spring Limited Partnership entered 2026 following a period of strengthening commodity prices and improving junior mining valuations. A first distribution completed early in 2026 enabled the Partnership to crystallize a portion of the gains generated during the stronger market environment that prevailed through late 2025. As market conditions weakened during the reporting period, the Investment Advisor and Fund Manager continued the orderly liquidation of the remaining portfolio in accordance with the Partnership's investment objectives and predetermined realization schedule.

The 2025 Fall Limited Partnership experienced a similar deterioration in market conditions. Although portfolio companies generally continued to advance exploration programs and generate technical progress, declining market liquidity placed pressure on share prices throughout the junior exploration sector. Selected positions were realized during the reporting period in preparation for a first distribution expected to be made to Limited Partners during September 2026.

Capital deployment for the 2026 Spring Limited Partnership commenced in March 2026 and continued through July. As the geopolitical conflict persisted into late spring and early summer, reduced trading activity and weaker investor sentiment negatively affected valuations across the sector, including a number of recently acquired investments. The Investment Advisor and Fund Manager believes these mark-to-market declines primarily reflect prevailing macroeconomic conditions and diminished liquidity rather than any deterioration in the quality or long-term potential of the underlying exploration assets.

Investment Process

The Partnerships are designed as short-duration investment vehicles with predetermined investment and realization periods. Consequently, the Investment Advisor and Fund Manager does not attempt to maximize returns through short-term market timing. Instead, capital is deployed progressively over several months and portfolios are liquidated systematically as liquidity permits. This disciplined process is intended to reduce concentration of timing risk by avoiding excessive reliance on any single market window for either purchases or sales. While periods of elevated volatility may temporarily affect portfolio valuations, the Investment Advisor and Fund Manager believes that a consistent and repeatable investment process provides the most prudent framework for balancing liquidity requirements with long-term value creation.

Market Environment

Commodity markets remained generally constructive during the first half of 2026. Copper increased approximately 9% , supported by structural demand arising from electrification, renewable energy investment, power-grid expansion and artificial intelligence infrastructure, together with continuing supply constraints. Gold entered the year at record levels before correcting during the second quarter as rising oil prices, higher bond yields and expectations of a more restrictive interest-rate environment outweighed initial safe-haven demand associated with the Middle East conflict. Lithium advanced approximately 32%, supported by strengthening energy-storage demand and tightening supply conditions despite continued volatility, while uranium gained approximately 5% as growing investment in nuclear energy and electricity demand associated with AI infrastructure continued to support favourable long-term fundamentals. Nickel declined modestly as uncertainty surrounding Indonesian production policy offset improving longer-term supply expectations.

Despite supportive commodity fundamentals, the S&P/TSX Venture Metals & Mining Index declined approximately 10% during the reporting period. Financing conditions remained challenging as central banks maintained a cautious approach to monetary policy and investors continued to reduce exposure to higher-risk sectors. The first half of 2026 therefore highlighted the continuing disconnect between favourable long-term commodity fundamentals and investor willingness to finance early-stage mineral exploration companies.

Outlook

The Investment Advisor and Fund Manager continues to believe that the long-term outlook for Canadian mineral exploration remains favourable. Global investment in electrification, critical minerals, artificial intelligence infrastructure, energy security and nuclear generation continues to support long-term demand for copper, lithium, uranium and other strategically important commodities. Government support through the Mineral Exploration Tax Credit and the Critical Mineral Exploration Tax Credit continues to encourage exploration financing, while Canada remains well positioned as a politically stable jurisdiction capable of supplying strategically important minerals.

Although geopolitical uncertainty and constrained financing conditions negatively affected junior exploration equities during the first half of 2026, the Investment Advisor and Fund Manager believes these headwinds are principally cyclical rather than structural. The remaining assets of the 2025 partnerships continue to be realized in an orderly manner consistent with their mandates, while the 2026 Spring Limited Partnership retains meaningful time within its investment horizon for exploration success and improving market conditions to contribute to value realization. The Investment Advisor and Fund Manager therefore remains committed to its disciplined investment and liquidation strategy and believes that maintaining a systematic approach, rather than attempting to time inherently volatile markets, continues to represent the most appropriate means of managing risk and pursuing attractive long-term outcomes for Limited Partners.

(1) This information is derived from the Partnership's June 30, 2026 (unaudited) financial statements and December 31, 2025 audited financial statements. The net assets per security presented in the financial statements differs from the net asset value calculated for fund pricing purposes. An explanation of these differences can be found in the notes to the financial statements.

(2) The Partnership is a closed-end partnership and no additional units can be issued after the completion of the final closing. In addition, no Partnership units can be redeemed until the time of dissolution of the Partnership. As a result, the units issued and outstanding as of the completion of the final closing were used to calculate the net assets attributable to limited partners as at June 30, 2026 and December 31, 2025 respectively and the increase (decrease) from operations for the six-month period ended June 30, 2026 and the increase (decrease) from operations for the period from commencement on March 28, 2025 to December 31, 2025.

(1) Management expense ratio ("MER") is based on total expenses less commissions for the stated period and is expressed as an annualized percentage of monthly average net assets during the period.
(2) The portfolio turnover rate indicates how actively the Manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Partnership buying and selling all the securities in its portfolio once in the course of the period. The higher a portfolio turnover rate is in a period, the greater the trading costs payable by the Partnership in the period, and the greater the chance of an investor receiving taxable capital gain in the period. There is not necessarily a relationship between turnover rate and the performance of a portfolio.
(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as a percentage of average net assets during the period.
